Allowable Subject Matter

1. Claims 1-17 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: A method and system for signaling the direction of an escape route is disclosed, comprising individual emergency warning units with a hazard sensor and luminous means. The luminous means of the individual emergency warning units are sequentially illuminated in manner of a running light by a central emergency system.

Harrison (US 4,737,764) discloses individual units leading in the direction of an escape route that generate an illuminated pattern in the form of a running light. However, Harrison does not disclose the individual units equipped with a hazard sensor. In addition, prior art that teaches an individual emergency warning unit that incorporates a luminous means and a sensor (for example, Curl et al. or Topol et al.) cannot be combined with Harrison because a hazardous sensor such as one that senses smoke, flame, heat would be impractical to incorporate in a floor unit. For example, since heat and smoke rise, the detector is, in most cases, located on a wall or ceiling. Moreover, the prior art indicates that this particular system and method is novel and has not been published or patented by other entities.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Curl et al. (US 5,019,805) discloses a wall or ceiling mounted fire detector that emits a visual and audio alarm upon detecting a fire and incorporates numerous detectors connected to a central emergency warning system.

Harrison (US 4,737,764) discloses individual units leading in the direction of an escape route that generate an illuminated pattern in the form of a running light.
